[GreenNest](#)

GreenNest is a modern AI-generated demo website created for internship purposes using Lovable AI. The website is designed as an eco-themed platform that represents a sustainable initiative focused on environmental awareness and community-driven green practices.

The website includes multiple structured sections such as a homepage, about section, services, and contact area. Each section is designed with a clean and user-friendly layout to demonstrate how AI tools can be used for rapid website development.

The homepage introduces the GreenNest concept with a nature-inspired theme, while the about section explains the mission and vision of promoting sustainability. The services section highlights key initiatives and engagement areas, and the contact section provides basic communication details.

This project showcases the practical use of AI in web development, focusing on structure, UI design, and deployment rather than real-world functionality.

Note: This is a demo project created for learning and internship evaluation purposes only.
